

Contact Form Solution Pack Getting Started Guide

The steps included in this Getting Started Guide are provided to help you accomplish all the necessary steps with ease. This is the same information that is provided in the read_me.htm file that is included with the Contact Form Solution Pack files.

What Do You Need to Start?

- Contact Form Solution Pack
- Text or WYSIWYG editor

Do you have a hosting provider?

Before proceeding with the steps detailed below, you will need to have already signed up for a hosting service from a hosting provider.

[Click here for instructions on how you can set this up.](#)

1. Modify the WA_Globals.php file

The WA_Globals.php file allows you to change various important settings that need to be defined for your contact form to work.

- Specify your email server credentials
- Customize CAPTCHA and security features
- Configure Email Subjects and From Addresses

2. Incorporate into your site

Most likely, you will want to incorporate your contact form into your existing website.

1. Apply your own template to the contact form
2. Add any additional form fields you require

<http://www.webassist.com/go/cfsp/howto/pages>

3. Uploading your files

The final step in getting your Solution Pack to work as desired, is to upload all the files included in the Solution Pack to your live web server. This may involve changing settings within your WA_Globals.php file from your testing server to your remote server.
