

Removing Security Features from the Contact Form Solution Pack

Depending on the purpose of the form, you may want to remove the Captcha security or the Random question security from your contact form.

This How To shows you which lines from your contactus.php page you will need to remove for these features to no longer exist on your page.

Note: The line numbers that are mentioned in this document refer only to an untouched contactus.php page. Refer to the screenshots to make sure that you remove the correct content.

What Do You Need to Start?

- Contact Form Solution Pack
- WYSIWYG or Text editor

Removing Captcha

1. Open the contactus.php page in your preferred editing application
2. Remove line 156.

```
155 var sprytextarea1 = new Spry.Widget.ValidationTextarea("
156 var sprytextfield3 = new Spry.Widget.ValidationTextField
    $WAGLOBAL_Captcha_Characters; ?>, maxChars:<?php echo $W
157 var sprytextfield4 = new Spry.Widget.ValidationTextField
```

3. Then, remove lines 112 through 128.

```
112 <label for="Security_code" ><br />
113 Security code:</label>
114 <br />
115 
117 <input name="Security_code" type="text" class="inputValue" id="
    (document.getElementById('captchaServerError')) document.getElement
118 <span class="textfieldRequiredMsg">A value is required.</span><
met.</span><span class="textfieldMaxCharsMsg">Exceeded maximum numb
119 <?php
120 if (ValidatedField("contact","contact")) {
121     if ((strpos(", ".ValidatedField("contact","contact").",", ", " .
122         if (!(false)) {
123     ?>
124     <span id="captchaServerError" class="textfieldServerError">Your
125     <?php //WAFV_Conditional contact.php contact(4:)
126     }
127     }
128 }?>
```

4. Lastly, remove line 17.

```
17 $WAFV_Errors .= WValidateLE(((isset($_POST["Security_code"])  
"captcha_1"))?strtolower($_SESSION["captcha_1"]):"" . "",true
```

Removing the Random Question

If you have already removed other security features, or added additional content, refer to the screenshot instead of the line numbers.

1. Open the contactus.php page in your preferred editing application
2. Remove line 157.

```
157 var sprytextfield4 = new Spry.Widget.ValidationTextField  
158
```

3. Then, remove lines 130 through 146.

```
130 <label for="Security_code" >  
131 <?php require_once("WA_ValidationToolkit/WAVT_CaptchaSecuri  
132 </label>  
133 <br />  
134 <span id="sprytextfield4">  
135 <input name="Security_question" type="text" class="inputValue  
(document.getElementById('securityServerError')) document.getElen  
>  
136 <span class="textfieldRequiredMsg">A value is required.</spar  
137 <?php  
138 if (ValidatedField("contact","contact")) {  
139 if ((strpos(",",ValidatedField("contact","contact").","),",",  
140 if (!(false)) {  
141 ?>  
142 <span id="securityServerError" class="textfieldServerError">!  
143 <?php //WAFV_Conditional contact.php contact(4:)  
144 }  
145 }  
146 }?>
```

4. Lastly, remove line 18.

```
18 $WAFV_Errors .= WValidateLE(((isset($_POST["Security_que  
$_SESSION["random_answer"])?strtolower($_SESSION["random_a
```
