

Separating the header or footer from the content

Please note that this technique only works as is with single column (content only, no additional left or right columns) layouts.

1. Run CSS Sculptor and choose your basic layout.
2. Click the **Box** tab.
3. Select **header** in the layout tree.
4. In the **Margin** subtab, enter **20** in the **Bottom** field and choose **pixels** from the associated unit list.
5. Select **footer** in the layout tree.
6. In the **Margin** subtab, enter **20** in the **Top** field and choose **pixels** from the associated unit list.
7. Click the **Design** tab.
8. From the layout tree, choose **outerWrapper**.
9. In the **Background Color & Border** section, cut the entry from the **Color** field.
10. From the layout tree, choose **contentWrapper**.
11. In the **Color** subtab, paste the entry in the **Color** field.
12. Click **Finish**.
